Volume 132 July 1983

CONTENTS

Effects of slowly varying depth and current on the evolution of a Stokes wavepacket. François-Marc Turpin, Chakib Benmoussa and Chiang C. Mei *page* 1

Magnetic-flux transport by a convecting layer – topological, geometrical and compressible phenomena. Wayne Arter 25

Thermal instability of two-dimensional stagnation-point boundary layers. K. Chen, M. M. Chen and C. W. Sohn 49

The meniscus on a needle – a lesson in matching. Lilian L. Lo 65

Instabilities in the slit-jet flow field. J. F. Foss and D. Korschelt 79

Scaling of the bursting frequency in turbulent boundary layers. R. F. Blackwelder and J. H. Haritonidis 87

Trapping of water waves above a round sill. Yuriko Renardy 105

Instabilities of dynamic thermocapillary liquid layers. Part 1. Convective instabilities. Marc K. Smith and Stephen H. Davis 119

Instabilities of dynamic thermocapillary liquid layers. Part 2. Surface-wave instabilities. Marc K. Smith and Stephen H. Davies 145

A theory for flow separation. William S. Vorus 163

Resistance and stability of a line of particles moving near a wall. Simon L. Goren 185

Large-scale modulations of edge waves. T. R. Akylas 197

Transition of Taylor–Görtler vortex flow in spherical Couette flow. Koichi Nakabayashi 209

Temperature-gradient-driven electrohydrodynamic instability with unipolar injection in air. James F. Hoburg 231

A technique for the direct measurement of volume flux of a plume. W. Douglas Baines 247

Shock diffraction in channels with 90° bends. D. H. Edwards, P. Fearnley and M. A. Nettleton 257

A note on the stability of low-Prandtl-number Hadley circulations. John Hart 271

An algorithmic approach to the linear stability of the Ekman layer. Mogens V. Melander 283

Stokes flow past bubbles and drops partially coated with thin films. Part 2. Thin films with internal circulation – a perturbation solution. Robert E. Johnson and S. S. Sadhal 295

A spanwise structure in the plane shear layer. JAVIER JIMENEZ 319

The primary electroviscous effect in a suspension of spheres with thin double layers. E. J. HINCH and J. D. SHERWOOD 337

Tests of subgrid models in the near-wall region using represented velocity fields. Y. KANEDA and D. C. LESLIE 349

Dispersal by randomly varying currents. G. T. CSANADY 375

A porous-wavemaker theory. ALLEN T. CHWANG 395

The laminar unsteady flow of a viscous fluid away from a plane stagnation point. MARK J. HOMMEL 407

A resonant test-field model of gravity waves. BRUCE J. WEST 417

Practical use of Hamilton's principle. RICK SALMON 431

Low-Reynolds-number flow past a cylindrical body. KO TAMADA, HIROYUKI MIURA and TOSIO MIYAGI 445

Time-dependent density profiles in a filling box. M. GRAE WORSTER and HERBERT E. HUPPERT 457

REVIEWS

Wave Energy – A Design Challenge, by Ronald Shaw 467

Wind Power Plants, Theory and Design, by D. Le Gourieres 470
